Twenty-fifth Annual Catalog

Since 1920 (its first year) the Puget Sound Seed Company has made every effort to provide pure seeds, honestly represented, with prompt service.

We believe that seed grown in the Puget Sound district has a higher vitality and quality than seed grown elsewhere. When not available, we procure the highest grade of hardy northern and western seeds grown for us by the finest seed firms in the country, in selected varieties best suited for Northwest gardens and climate.

If you have used Puget Sound Seed Company's seeds before, you know how satisfactory they are. We hope you will recommend them to others. If you are using our seeds for the first time, we hope you will note how choice the vegetables and how fine the flowers. Your recommendation to others will be greatly appreciated.

The planting directions given on the packages are necessarily brief. More complete information will be supplied at your request.

OUR GUARANTEE

We guarantee the vitality and purity of our seeds to the full amount of the purchase price. There are many natural causes why good seeds fail to grow—planting too early, while the ground is still too cold and wet; planting too deep; lack of moisture. Insects and birds eat the tender sprouts as soon as they appear. Should results not be satisfactory, we would like to help you ascertain the cause and correct it. We are so sure of our seeds that we send a duplicate package **from the same lot**, for replanting, on request, where first results were not right, provided the empty envelope is enclosed with the letter.

Because success depends greatly on good cultural practice and climatic conditions, we shall in no case be liable for more than the price paid for the seeds or their replacement. If they are not accepted on these terms they must be returned immediately.

The War must be won on the Home Front as well as in Europe or the Pacific. You can help. Raise your own vegetables.

PLANTS for PARTIAL SHADE and MOIST LOCATIONS

SUPER-SWISS PANSY PLANTS

PANSY PLANTS

Nothing can be substituted for Pansies in your garden. They produce colorful blooms from spring to late fall, and afford a wonderful opportunity for working out color combinations, when chosen in the separate colors. To be used as ground-cover for spring bulbs or for mass planting. Our Pansies are re-selections of the largest flowered types, and under favorable conditions the blossoms are 3 to 5 inches in diameter. The plants are sturdy and have good vigorous root growth. We make every effort to produce plants of the highest quality. Large plants (mixed color only). Doz. \$1.00; 25, \$1.75; 50, \$3.00. Postpaid.

SNOW PRINCESS—VIOLET PLANTS

These giant white English Violet are similar in growth to the common long-stemmed Purple Violet, and prefer a cool moist shady location for real long stem. However, they will grow in most any location, except very dry places in full sun. An excellent plant for the north side of the house. Price: Each 35c; 2 for 60c; 6 for \$1.50.

VIOLA GROUP

The plants are perfectly hardy and withstand drought well. They grow in the form of a dense mat of foliage about 2 to 3 inches high. Single plants form a matted clump at least 12 to 15 inches in diameter by the second season if cared for properly. The flowers are borne on strong, sturdy stems about 5 to 6 inches long. The flowers stand well above the foliage in very large quantities, forming a well-kept, neat border plant which will thrive in any sunny location. As a border to small shrubs this plant is unusually attractive. If the flowers are kept picked, the plant continues to bloom profusely all season long.

PRINCE CHARMING

Color is a lively deep, plum purple, brighter towards the center. Tiny yellow eye. Flowers are very fragrant with the odor of hothouse violets, which it retains for several days indoor when picked. Because of the great demand for this wonderful new viola we have been obliged to limit the plants to SIX to a customer. Price: 2 for \$1.00, postpaid.

PRIMROSES . . . GIANT POLYANTHUS and AURICULAS

HARDY PRIMROSES are among the most popular and best known of all perennials; finest of all plants for growing along shady walks, among flowering trees and on the edges of shrub groups. They are the most perfect of all perennials for the SHADY GARDEN and are suitable for northern exposures; same as the Violet. We have just purchased one of the finest collections of both Polyanthus and Auriculas that we have ever seen.

GIANT POLYANTHUS. So called because each long, sturdy flower stem bears not a single bloom like the Aculis sorts, but a cluster of blooms which each measure 1½ to 2 inches in diameter, when grown under special care. We have never seen larger flower or more dazzling colors than we offer in this mixture. Plants of this type and quality usually sell for 50c to 75c each in mixture. Prices, postpaid: 3 for \$1.00; 6 for \$1.75; doz. \$3.00.

PRIMULA AURICULA. This alpine beauty has the brightest colors imaginable and while not as well known as its cousin the Giant Polyanthus, is equally striking. Each sturdy flower stem is a bouquet in itself of banded blossoms, often as large as the Giant Polyanthus. Plants do best in sharp sand or rocky soil around the roots for proper drainage. They also need plenty of moisture and partial shade during the blooming season, which usually occurs April to June and often again in the fall. (See page 14 for seed.) Single plants: 45c each; 3 for \$1.25.

All plants on this page are offered subject to non-delivery and refund of purchase price in case of retarded growth due to abnormal winter weather.

PRIMULA AURICULA

HARDY LILIES FOR ALL SUMMER GLORY

Lilies, unlike Narcissus bulbs, are not all grown in one locality under one and the same conditions, but are gathered together from many foreign countries. All ripen at different times of the year; therefore, orders for Lilies cannot always be filled at one time. The requirements of Lilies vary with each variety. Because of the lack of knowledge and the carelessness of many planters, we do not guarantee Lilies to grow. We do, however, guarantee to supply you bulbs in good condition and will replace without charge any damaged bulbs, immediately upon hearing from you.

CANADENSE FLAVUM. Graceful and charming. Golden yellow bell-shaped flowers spotted black. Dislikes lime. Small bulb but should be planted 6 inches deep. June, July. 3 to 5 feet. 2 for 85c; 6 for \$2.25.

BELLINGHAM HYBRIDS. These lilies, which are the results of years of hybridizing at the Government Experiment Station, Bellingham, and are descended from the well known L. Pardalimum, which they resemble. They generally bear 12 to 20 strongly recurved flowers of bright orange shade, spotted with crimson. They like moisture and do not like too much lime. 2 for 95c; 6 for \$2.75.

HENRYI. A splendid garden plant, vigorous in its growth, failing very seldom. One of the best border lilies, reaching over 8 feet and more in height when established, and bearing more than 20 flowers of a rich, deep orange-yellow. Fine foliage. Does well in both light and heavy loam. Aug.-Sept. flowering. Sold out.

REGALE. From western China; one of the most beautiful of Lilies. It grows 3 to 5 feet high. Blooms out-of-doors in July, is perfectly hardy, and flourishes under widely varied conditions. The large, trumpet-shaped, delicately scented flowers, produced freely, are ivory-white shaded pink, tinged canary-yellow in throat. Fine for forcing. Price: 2 for 60c; 6 for \$1.75.

TIGRINUM SPLENDENS. Orange-red, purple spotted. Stem-rooting. Plant 9 inches deep. The finest form of Tiger Lily with the richest color. This lily is very robust in habit and of easy culture. August-September flowering. Price: 2 for 55c; 6 for \$1.50.

Camellia Flowered Tuberous Rooted Begonias

See color cut on inside front cover.

CULTURE

Begonias are without doubt one of the most beautiful and satisfactory of all house or semi-tender outdoor bulbs. The lovely flowers are borne in profusion during the summer months, when planted outdoors in a moist shady spot, or in window or porch boxes on the north side of the house. They do not do well in direct sunlight when exposed to it over one-half of the day.

Tubers start best in open trays where the bulbs are dampened slightly once in a while until the sprout appears, then plant in a flat or pot in a mixture of peat and sand, leaf mold and sand, or peat moss alone, all of which give excellent results. Plant tubers ½ inch below surface and keep moist, not wet. Do not transplant until there is 3 to 4 inches of growth, and if planted outside only when the weather is warm, generally after May 15th, for best results.

We offer these gorgeous flowers in five lovely colors: YELLOW, PINK, FLAME-ORANGE, CARDINAL RED and APRICOT.

Each 25c, 3 for 65c. One of each for \$1.00.
